The Economic Power of Home Ownership

How investments in cost-manageable housing create long-lasting rewards
Jackie’s story:

“Without that house, my boys would not be in college.”

Ninety percent of Habitat homeowners in GA noticed a positive change in their kids’ study habits.

Six out of ten say they are now more confident that they’ll be able to send their children to college.

Forty-three percent have started or completed higher education or training programs since becoming a Habitat homeowner.
What happens to families who become homeowners... even if they only move across the street?

The Brownsville Homes Case Study
Brooklyn, NY

"Home ownership shifted their future, like a ship changing course. It is one of the dividing lines between children who grew up to do better than their parents and those who did not. A cycle of poverty has been broken by those $30,000 houses. Families now have wealth that they can pass down generationally."
Making home ownership cost-manageable helps families & the entire community.

More than 80% of GA Habitat homeowners feel more financially secure than before.

Since becoming homeowners, 74% are better able to save money.

Seventy-one percent are better able to pay bills on time.

Nearly 70% of those who received public assistance have reduced or eliminated their need for it.
The role of the state in making home ownership cost-manageable

Lower the threshold for economic participation & wealth building

Public/private partnerships — no one can do it all

Legislation = stability = safety for commitment from partners

Not “on spec” — existing base of qualified home owners
Case Study: The Habitat model

A virtuous cycle of investment, re-investment, and return on investment
Phase One: Community Investment

Seed investment from a variety of partners provides funding to create cost-manageable housing in the community.
Phase Two: Builder and Home Owner Investment

Spending on construction, renovation, and overhead flows into the local economy. Homeowners and renters pay back their investment through cost-manageable mortgages and leases.
Phase Three: Return on Investment

Construction and renovation, property value stabilization, and reduced need for public assistance benefit the local government. Families with stable housing contribute more to the local economy. Local businesses benefit from construction and renovation spending.
Families at the target level of income spend almost all of their disposable income locally.

Families spending more than 30% of income on housing must spend less elsewhere — fewer cars, computers, restaurant meals, clothing items, cable subscriptions, even prescription medicines.

Unrenovated derelict housing provides a haven for crime and is unproductive for the city.

Lack of cost-manageable housing makes a county less attractive to new business, and increases the odds that young people will move away.
Why Georgia?

Lowest home ownership rate in Southeast

One of lowest home ownership rates in the United States
Where to Start?

Heavily cost burdened rural areas surrounding urban and suburban population centers.
